“Only a few know how much one must know to know how little one knows”

Summary

Product and Staff Engineer with 8+ years building AI, ML, data, and full-stack product systems from 0-to-1 through scale. Founding engineer at Syrup through its successful acquisition by Anaplan, now focused on Anaplan-native agentic and conversational platform innovation. Strong bias toward ownership, customer-backed product decisions, and production-grade architecture.

Work Experience

Anaplan – AI Engineering Division

New York, United States

STAFF ENGINEER

Sep 2025 - Present

- Joined Anaplan through Syrup’s successful acquisition, leading technical integration work to bridge startup architecture, data flows, and product workflows into Anaplan’s enterprise environment.
- Now focused on innovation-track work for Anaplan-native agentic and conversational platform capabilities: agents, chat experiences, MCP-style tool integrations, retrieval/vector search, and production-grade AI application architecture.

Syrup Tech (acquired by Anaplan)

New York, United States

FOUNDING ENGINEER / STAFF ENGINEER

Apr 2022 - Sep 2025

- Joined as Founding Engineer #2 at pre-seed and grew into Staff Engineer responsibilities, helping scale Syrup from 0-to-1 product-market fit into an enterprise-ready platform and successful acquisition by Anaplan.
- Led core optimization and intelligence systems for retail inventory decisions, reducing recommendation runtimes from 8+ hours to under 1 hour while automating manual workflows.
- Owned end-to-end product delivery across ML/data pipelines, backend services, frontend UX, and cloud infrastructure, partnering directly with founders and customers on high-stakes deployments.
- Led platform maturation across multi-tenant architecture, tenant onboarding, reliability, performance, and cost work in Snowflake/dbt, Postgres, and application services.

DareData Engineering

Lisbon, Portugal

MACHINE LEARNING ENGINEER

Jun 2021 - Apr 2022

- Engineered ML and MLOps systems for enterprise clients, including R-to-Python model migrations, distributed hyperparameter optimization, MLflow, Databricks, AzureML, and GCP/Kubernetes/Airflow NLP pipelines.
- Developed a computer vision proof of concept for solar potential estimation from satellite imagery using PyTorch, OpenCV, and GIS integrations.

Jungle AI

Lisbon, Portugal

MACHINE LEARNING/SOFTWARE ENGINEER

Jun 2018 - Jun 2021

- Spearheaded core predictive modeling for time-series use cases and contributed to 5+ energy and heavy-industry projects from data ingestion through client-facing analysis.
- Built production software across FastAPI, Node.js, Postgres/TimescaleDB, AWS S3, Prefect, Argo, Kubernetes, CI/CD, InfluxDB, and Grafana.

Technical Skills

Languages Python, TypeScript, SQL

Product AI Agents, chat UX, tool use, vector search

ML & MLOps PyTorch, Scikit-learn, XGBoost, LightGBM, MLflow, Databricks

Data Snowflake, dbt, PostgreSQL, TimescaleDB, Elasticsearch, PySpark

Infrastructure AWS, GCP, Azure, Docker, Kubernetes, Argo, Airflow

Engineering Full-stack product development, distributed systems, CI/CD, leadership

Education

Instituto Superior Tecnico - University of Lisbon

Lisbon, Portugal

MSc IN ELECTRICAL AND COMPUTER ENGINEERING

Sep 2012 - Jun 2018

- Master’s thesis: “An overview of deep learning strategies for time-series prediction”. Work done in collaboration with Jungle AI.
